

WEBSITE QUALITY REVIEW

Zanic Cosmetics

Lighthouse, accessibility and SEO readiness report

100	100	100
ACCESSIBILITY	SEO	BEST PRACTICES

Prepared for client review

Audit date: 5 October 2026

Executive summary

The Zanic Cosmetics homepage passed the available Lighthouse quality checks on both desktop and mobile. Accessibility, Best Practices, SEO and Agentic Browsing each scored 100, with zero failed audits in the final runs.

Category	Desktop	Mobile
Accessibility	100	100
Best Practices	100	100
SEO	100	100
Agentic Browsing	100	100
Failed audits	0	0

These scores mean the site meets the measured technical quality checks in the audited environment. They are a strong foundation for launch and search visibility.

What the SEO score means

A 100 SEO score indicates that the audited page meets Lighthouse's technical SEO checks. In practical terms, the page is structured so search engines can access and understand its primary content, links and mobile presentation.

SEO area	Client-friendly explanation
Crawlability	Search engines can access the page and follow its internal links.
Mobile readiness	The page is usable and readable on mobile screens, which is important because Google primarily evaluates mobile versions.
Page metadata	The page has the core title and description signals used to represent it in search results.
Content structure	Headings, links and page structure provide meaningful signals about the site's content.

Important distinction: a 100 SEO score does not guarantee a Google ranking or immediate inclusion in search results. Google makes those decisions using many signals, including relevance, authority, competition, location and indexing history.

Performance and technical verification

A Chrome performance trace was recorded during the review. The observed metrics were excellent for the tested homepage load:

Metric	Observed result	Why it matters
Largest Contentful Paint	454 ms	The main content appeared quickly.
Cumulative Layout Shift	0.00	The page stayed visually stable while loading.
Build verification	Passed	The optimized Next.js production build completed successfully.
Code quality	Passed	The project lint check completed without errors.

Testing conditions

The Lighthouse audits were run as navigation audits against the local homepage in desktop and mobile modes. The performance trace used 1x CPU throttling and no network throttling. The final production URL should be tested again after deployment so the report reflects the live Vercel environment, CDN, domain and production headers.

Recommended Google launch steps

To turn this technical readiness into Google visibility, complete these launch steps after deployment:

1. Confirm the live domain resolves over HTTPS.
2. Open Google Search Console and verify ownership of the domain.
3. Submit the site's sitemap and request indexing for the homepage.
4. Check the URL Inspection report for crawl and indexing status.
5. Add or verify the Google Business Profile if the business serves customers from a physical location.
6. Monitor impressions, clicks and indexed pages after launch; SEO performance develops over time.

Final status

The Zanic Cosmetics homepage is technically ready based on the completed local Lighthouse audit: all reported quality categories scored 100 on both desktop and mobile, and no audits failed. Production verification after deployment is the final step before treating these results as the live-site baseline.
